

IMPORTANT!

This electric kit has to be installed by a professional workshop or a suitable qualified person.

The installation instructions must have been read and fully understood before the start of any installation. Please contact your wiring kit provider or the hotline shown in the footer should you need assistance!

Make sure the vehicle is approved/homologated by the manufacturer to tow a trailer!

Also please check that there is a definite compatibility between this vehicle and the electric kit!

Following the installation of the electric kit, the fitting instructions should be kept together with the vehicle service document and vehicle handbook. The fitting instructions contain important information relating to the use and function of the towing kit as well as for any diagnostic or activation process, that might have to be repeated in the future (e.g. after the performance of a vehicle software update).

All warranty claims will be forfeited if the electric kit or components contained therein are used incorrectly or modified. If a towing socket adaptor has been used to connect to the trailer or bike rack, this must be removed from the trailer socket once the trailer or bike rack has been disconnected.

If the trailer or bike rack is not equipped with a rear fog lamp, depending on the towing vehicle type, the correct function of the towing kit cannot be guaranteed. In such cases, a rear fog lamp should be retro fitted.

This towing electric kit will not be covered under warranty if any technical or electrical modifications or software updates have been performed by the vehicle manufacturer after the initial commissioning of the kit. That applies especially to modifications or updates which may cause malfunctions in the trailer socket or any other part of the trailer electrical equipment!

Depending on the type of trailer module used in this electric kit, diagnostic interrogation with the vehicle's electrical system may be limited or will not function. The error memory inside the trailer module may not be able to be accessed by vehicle manufacturers diagnostic system.

Error logs relating to the trailer electrical equipment, that may be generated in the vehicle manufacturers diagnostic system as a result of a test procedure, may be due to the incorrect installation of the towing electric kit or the false activation of the trailer module.

We always recommend whenever possible, the following troubleshooting process:

→ An analysis of the vehicle's error memory and possibly clearing of all faults before the start of the installation!

→ Try disconnecting the trailer module from the towing harness and re-start the fault clearing process!

➔ If in doubt, limit the time for troubleshooting to a max of 0,5 hours and call our Technical Support Team!

Please follow our instructions carefully and always test the towing electrics using a true lighting board or a specifically designed bulb tester. If an LED tester is used, ensure it is equipped with correct load resistors or malfunctions will occur!

SYMBOL EXPLANATION

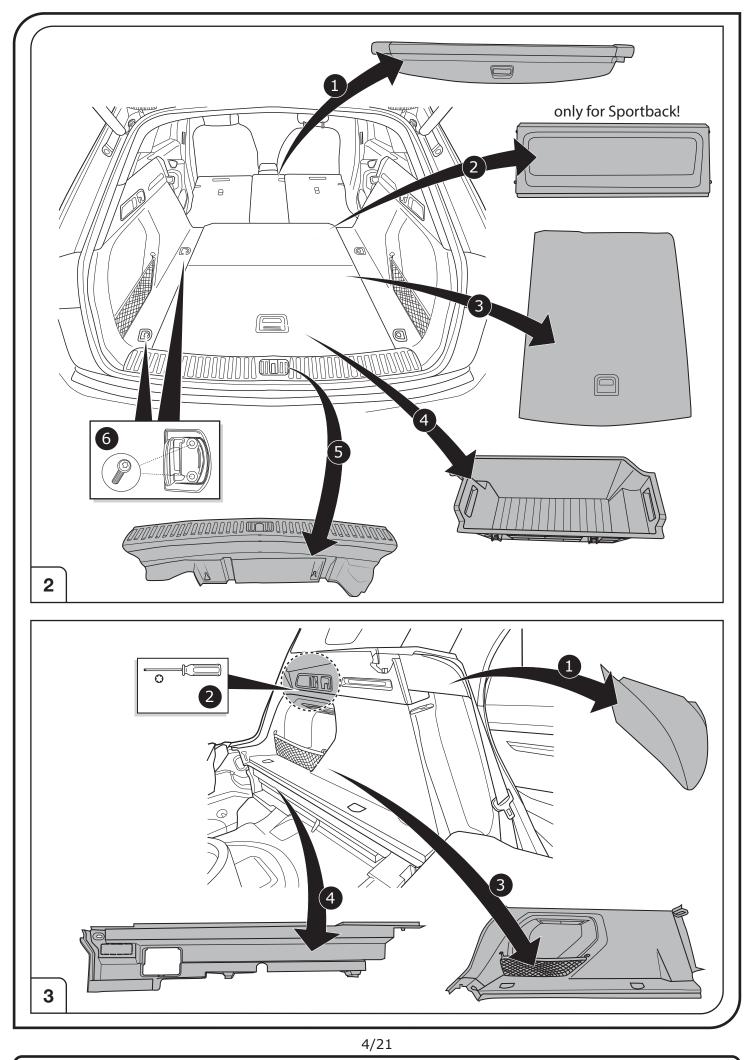

-Ď.	Left (58-L) respectively Right (58-R) tail light
54 (STOP)	Stop light (54) / high mounted, third stop light (54)
	Turn signal indicator left
	Turn signal indicator right
()≢	Rear fog light(s)
Reverse 05	Reversing light(s)
30+	Permanent power supply / 13pin socket, chamber 9
15+	Charging wire for trailer battery / 13pin socket, chamber 10
	Trailer / trailer recognition
B+/30	Permanent current power supply
<u> </u>	Ground or Earth (31)
$\overline{}$	Ground connection battery terminal lug
+	Positive connection battery terminal lug

	Cigarette lighter / accessory socket
	Loudspeaker / buzzer
	Park Distance Control
	Switch / source of function
• •	Connect together
	Disconnect
4	Look at / See further information
	Look carefully at selected area
\checkmark	Present / Occupied / OK
	Not present / Not occupied / Not OK
D((((Acoustic indication
\triangle	Attention / important advice
20 Amp.	Fuse / fuse capacity 20 Ampère

Set up trailer operation Diagnosis Services or diagnostic methods (local / offline): Please note: Always use the latest diagnostic version! The vehicle to be coded must be supported by the diagnostic service provider and already be implemented in the diagnostics version! Please contact your diagnostic service provider in case of any question. - ODIS - Hella Gutmann - VCDS Autologic Bosch / KTS - SP Diagnostic - SUN - Jifeline - Autocom - etc. pp. **CODING WITH ODIS** RFK_6C (reverse camera system) >installed equipment ahk Please note: STF_74 (chassis control system) Trailer >installed The procedure described below for encoding and enabling the trailer mode only serves for a general EPH_76 (PDC controller) Trailer >trailer device can be removed orientation and can vary greatly depending on the model (motorisation / equipment). If necessary less or manually further control units will have to be adapted. DIS_13 (controller distance control After connecting to ODIS, the "69 trailer function" (possible login code: 20103) controller has to be set to encoded in the target Control module for towing sens >installed installation list. Alternative encoding DIS_13 as follows: The following may be necessary in the further course Self diagnose control unit of work: Access authorization >20103 Encoding EZE_09 (electronic central electric controller): Binary encoding Byte 3 Diagnosis (possible login code: 31347) Binary or Hex >xxxx**1**xxx Networking plan Controller self-diagnosis >+8 03 Brake electronics Acces authorisation > 61378 Encode Trailer connection device >installed Adjustments Trailer stability >Active or: hitch_ecu >installed Alternative encoding EZE_09 as follows (MY 2017 >>): Self diagnose control unit FFF_A5 (front sensor system controller) AAG >coded >coded Access authorization >31347 Adjustment HDE_6D (boot lid electronics controller) Integration Trailer control unit > installed Trailer >installed Important note on encoding and activating in ZKS_46 (Central module convenience system) trailer mode The aforementioned settings are carried out in the trailer monitoring trailer control unit >put on active >installed vehicle's electrical system and saved locally. During general updates for the vehicle software (for example, SWA_3C (Lane Change Assist) ECU for draw bar >with ECU for draw bar within the scope of service or repair work), the settings may be overwritten and deleted under certain circumstances. In this case, the trailer mode activation has to be updated again locally after the update. SW2_CF (Lane Change Assist2) ECU for draw bar >with ECU for draw bar Diagnostic information relating to the trailer mode that may appear during variance comparisons with the SCH_17 (Dash panel insert) 36 data saved in the manufacturer's works, may form the basis of the local activation. Trailer The following light functions for the trailer are not supported by all towing vehicles with DRL circuit: Rear lights Side lights Numberplate lights The taillights or dimmed headlights must be switched on to activate this function! 37 17/21
